

RUTLAND TOWN

Septic Suitability 1997

"Soil Ratings for Residential On-site Waste Disposal"

NOTES: The septic system design classes shown on this map have been developed by the Natural Resources Conservation Service (NRCS). For more information, refer to: "Ancillary Soil Interpretation Ratings for On-Site Sewage Disposal in Vermont", 1997. This document is intended to indicate corrective measures needed in order to install septic systems on soil that are "severely" rated for septic system absorption fields. This map is intended for planning purposes only and is not intended to replace or supercede an on-site soil investigation. For more information on specific requirements and exemptions refer to the Agency of Natural Resources' report "Wastewater Systems and Potable Water Supply Rules", 2002. NRCS soil scientists map soils down to a three acre minimum, these areas may include a small area that has different soils than the dominant named soils.
